

# SCANCON

We add value to your business through  
**INNOVATION, QUALITY AND SERVICE**

## The beginning

SCANCON stands for Scandinavian Construction Company, and was founded in Denmark in 1973. During the company's first years, the company focused on solutions within technical design. But quickly the company transitioned to production of high technology incremental and absolute encoders. Since this change in strategy, SCANCON has experienced increased demand for their products. Through the 80's and the 90's, SCANCON gained customers in Europe, Asia and North America. In the new century, we have opened offices in China and India, as part of SCANCON's continuing strategy of expansion.

## A partner that creates value.

At SCANCON, we have created our organization with a single purpose. We strive to be the company within our industry that creates the greatest value for our customers. Our employees are educated to cover the customer's needs down to the smallest detail, and in our Development Department, every product is designed and tailored to perform the exact function the customer needs. We are aware that new needs suddenly arise, therefore our technical experts are never more than a phone call away. They are available most of the day and can apply all modern communication platforms in the dialog with customers.

## SCANCON creates innovations

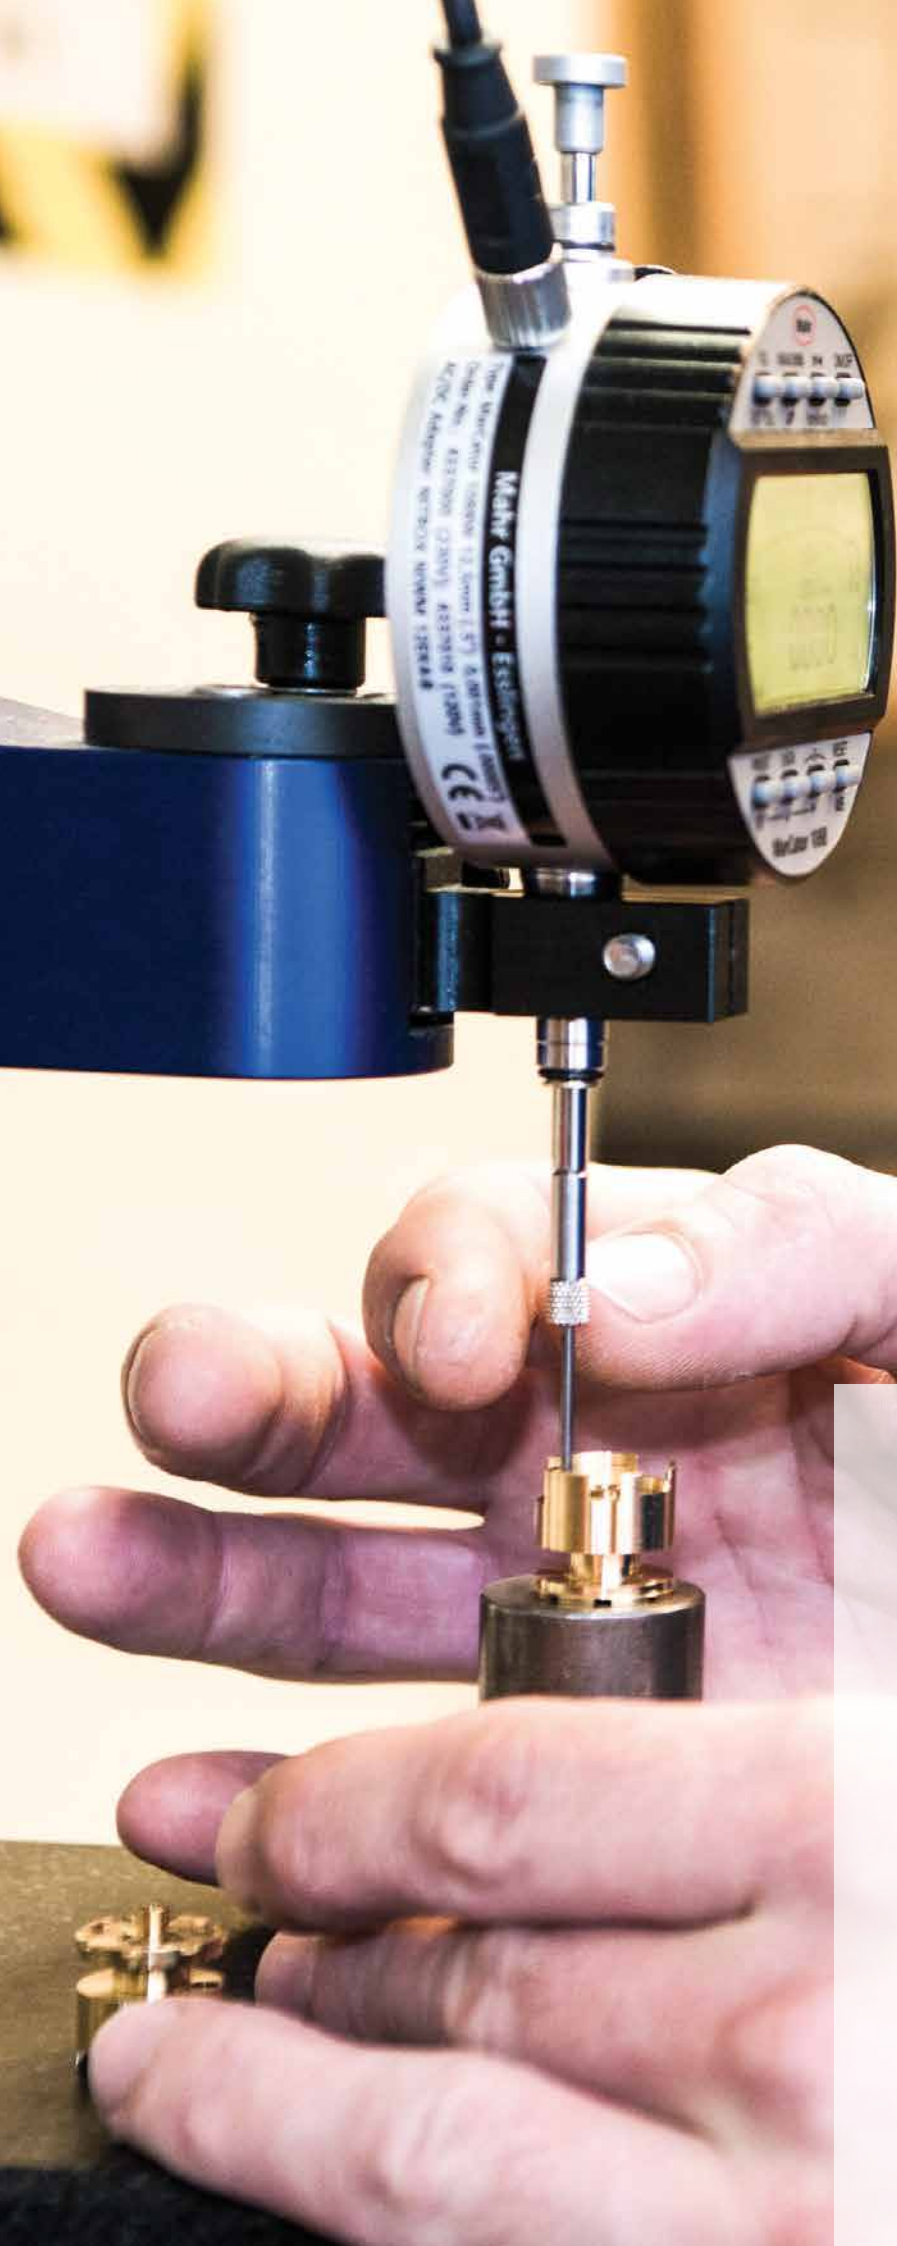

SCANCON offers rugged and reliable encoders. Our product option combinations provide more than a million encoder types, which are continuously quality controlled in our laboratory. SCANCON attracts and maintains some of the best and most innovative engineers from around the world, who contribute to setting the agenda for development of encoders and the possibilities of incorporating new technology. Our employees share experience across organizations and are continuously trained so they continue to develop products with the latest knowledge. With focus on innovation, they create new products, which add value for the customer. Contact SCANCON for more information on how the best encoders can make a difference for your company.

**KOATEK** A/S

**If Quality matters**

The bottom section of the page features a large banner. On the left side, there is a close-up photograph of a metallic industrial component, possibly a bearing or a part of a machine, with a red-tipped tool or probe. The right side of the banner has a light beige background. The KOATEK A/S logo is prominently displayed in the center, with 'KOATEK' in large blue letters and 'A/S' in smaller blue letters to its right. A red swoosh underline is positioned beneath the logo. Below the logo, the slogan 'If Quality matters' is written in a bold, black, serif font.

## SCANCON today

SCANCON has achieved significant market position by producing encoders which are characterized by a combination of Danish quality and custom-made solutions that create value for the customer. SCANCON delivers encoders for a wide range of industries for applications in Wind Industry, Pick and Place-machines, Medical and Food industries.

We are especially known for our explosion-proof encoders which are used in the Oil and Gas and the Mining industry.

**precitec**  
Precision technology

**Your partner for precision part solutions**

We are specialists in the development and manufacturing of precision components in a large array of technologies.

- Electroforming • Etching • High vacuum and sputtered coatings • Mechanical engineered products (micro-stamping, precision machining, deep drawn products) • Structures on glass and film (for example encoder discs and apertures) • Manufacturing of micro prisms and special lenses
