### Scancon Encoders

### RoHS Certificate of Compliance

EU Directive 2002/95/EC (Restriction of Hazardous Substances) restrict the use of the 6 substances below in the manufacture of specified types of electrical equipment.

Whilst this restriction at the present time does not legally apply to Scancon Encoders, it is recognised that component "compliance" is also relevant to many customers.

RoHS Compliance definition:

RoHS compliance means that the product does not contain any of the restricted substances in concentrations and applications banned by the Directive.

The restricted substances and maximum allowed concentrations in the homogenous material are, by weight:

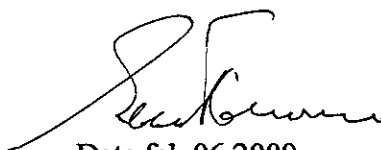

| <b>Substance</b>                       | <b>Concentration</b> |
|--|----------------------|
| Lead                                   | 0.1%                 |
| Mercury                                | 0.1%                 |
| PBB (Polybrominated Biphenyls)         | 0.1%                 |
| PBDE ( Polybrominated Diphenyl Ethers) | 0.1%                 |
| Hexavalent Chromium                    | 0.1%                 |
| Cadmium                                | 0.01%                |

The sub suppliers of the items incorporated in Scancon Encoders has informed us that their product is "RoHS Compliant".

Scancon has taken all reasonable steps to confirm this statement.

Scancon Encoders certificate compliant of the RoHS directive

Information relates only to products sold on or after the date of this certificate.

Date feb 06 2009
